BEFORE WE START

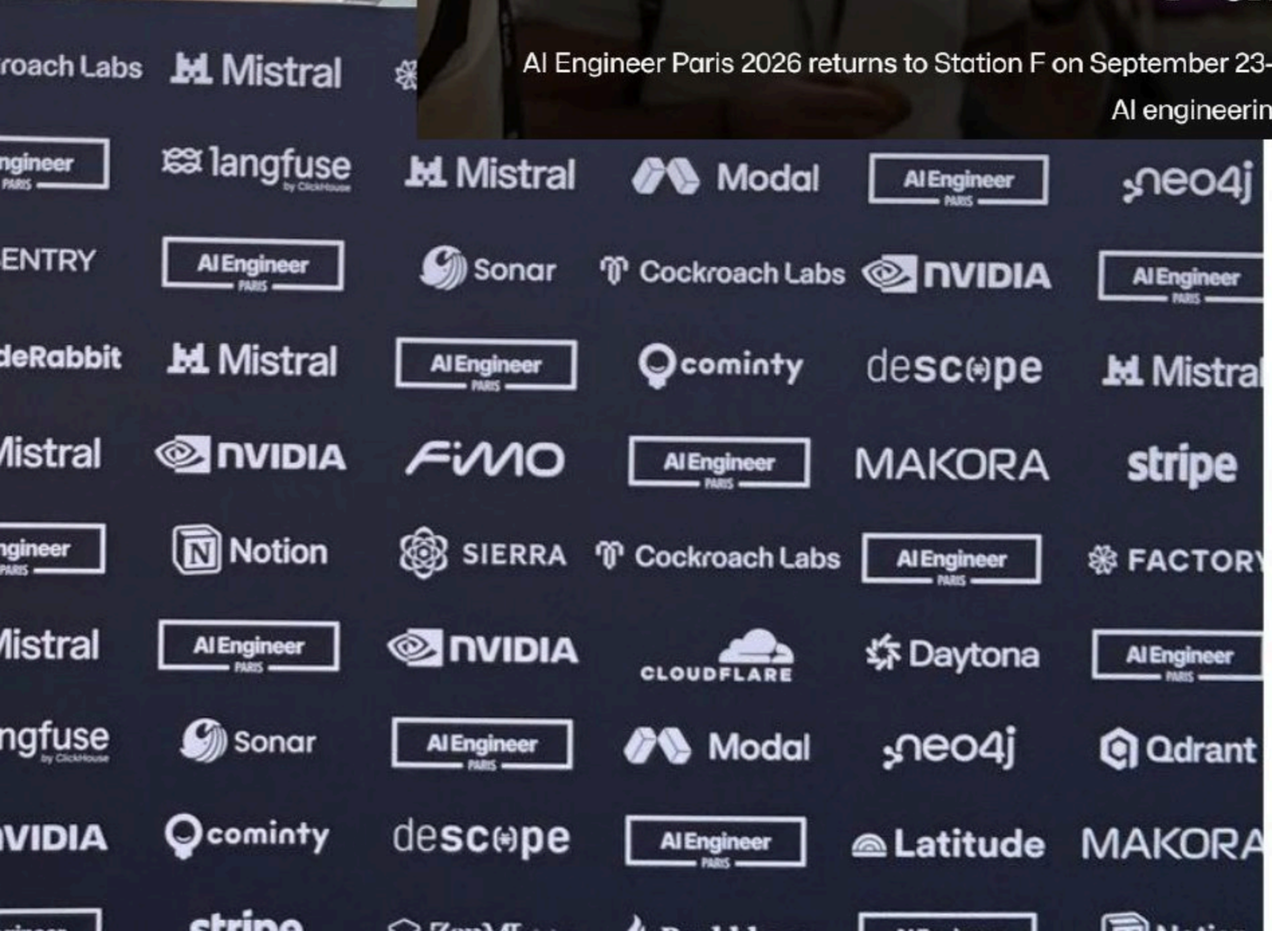

Let's open with a laugh.

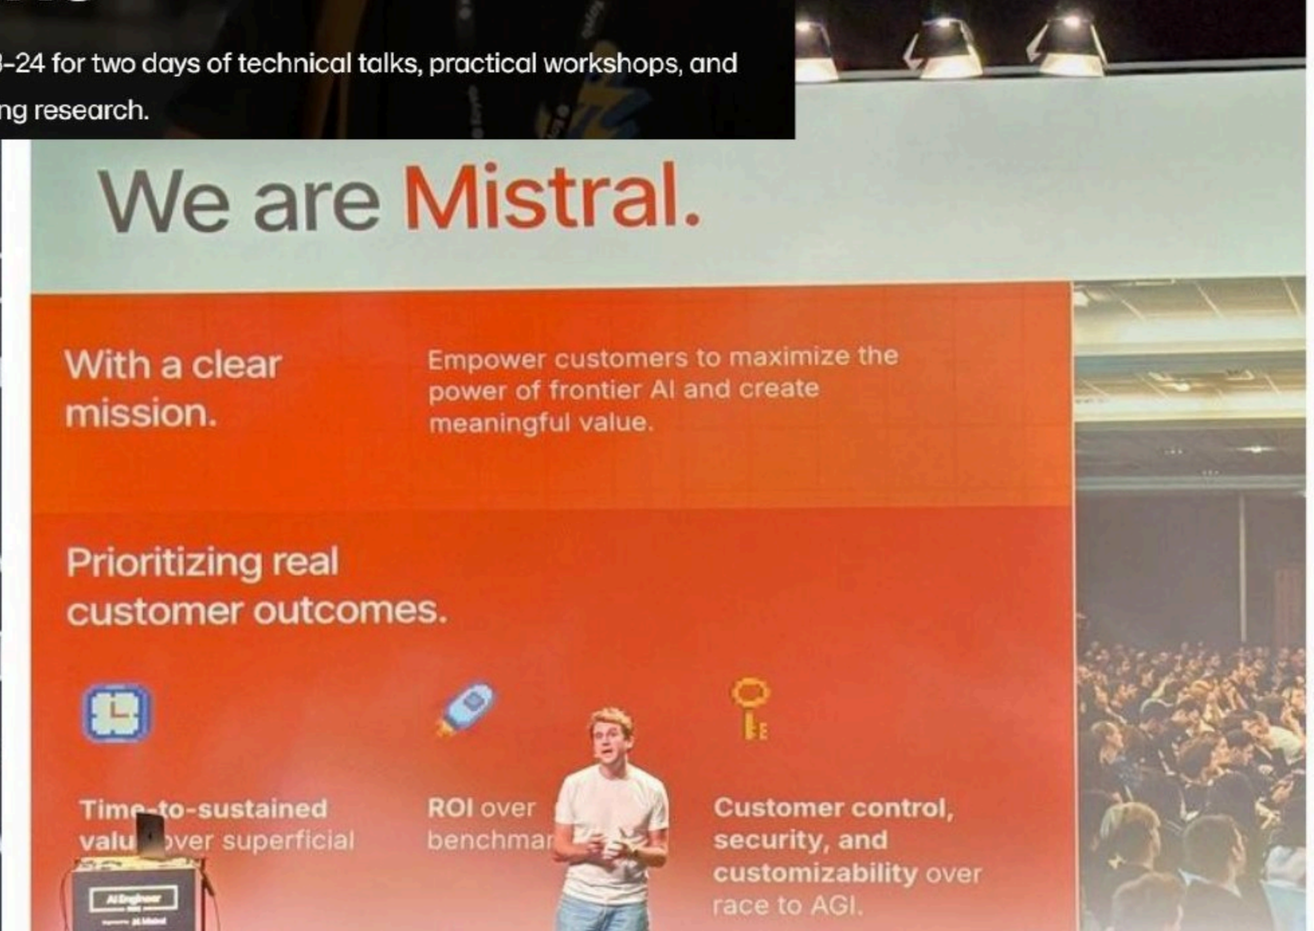

Kitze on what it is really like to be an AI engineer today.

AI Engineer
PARIS
September 23-24, 2026 • Paris
The Second Edition Of AI Engineer in Paris
AI Engineer Paris 2026 returns to Station F on September 23–24 for two days of technical talks, practical workshops, and AI engineering research.

MAKORA

We are Mistral.
With a clear mission.
Empower customers to maximize the power of frontier AI and create meaningful value.
Prioritizing real customer outcomes.
Time-to-sustained
ROI over
Customer control, security, and customizability over race to AGI.

PARIS · 23–24 SEPTEMBER 2026

Two days. One idea kept coming back.

Rooms full of people who build with AI every day. Hosted by Mistral.

THE ONE BIG IDEA

AI agents are becoming our users, our buyers and our workforce.

So we have to design for them, feed them great context, and govern them.

WHAT I HEARD

Four shifts I'm carrying home.

1

Customer

Agents are the new users.

2

Build

Context decides who wins.

3

Control

Agent sprawl is real.

4

Market

Pricing moves to outcomes.

SHIFT 1 · CUSTOMER

Agents are the new users.

UX, CX, DevX. Paris added a fourth persona: **Agent Experience (AX)**.

Most billing documents are already read by AI agents, not humans.

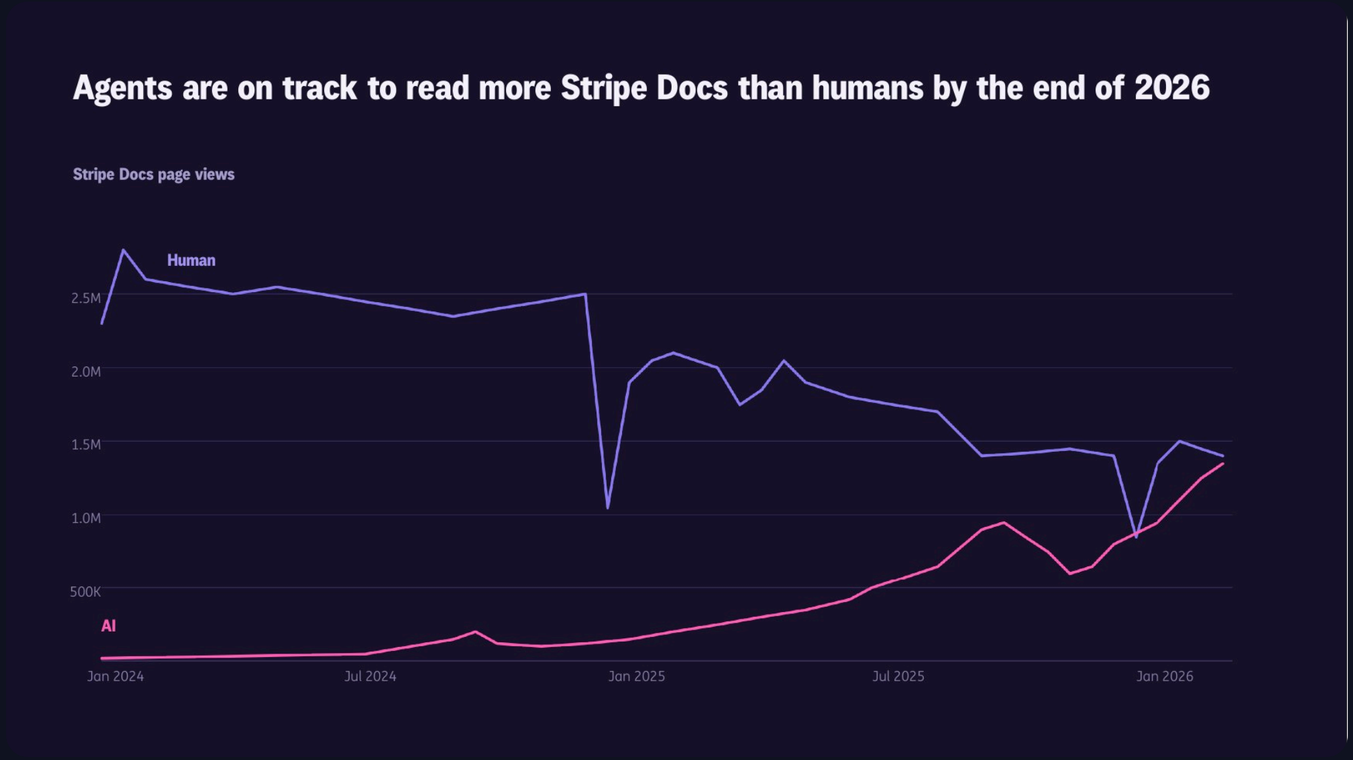

Chart shown in the Stripe talk, AI Engineer Paris

SHIFT 1 · CUSTOMER

And they are starting to buy.

Agents now initiate payments. The rules of the agent-payments economy are not written yet.

SHIFT 2 · BUILD

Everyone has agents. Nobody has orchestration.

Context is everything. An agent is only as good as what it is given.

Great data is critical. Without it, slop grows.

Specialists beat generalists. Many agents, one common core.

SHIFT 3 · CONTROL

We learned to observe our software. Now we must observe our workforce of agents.

Hottest topic in Paris

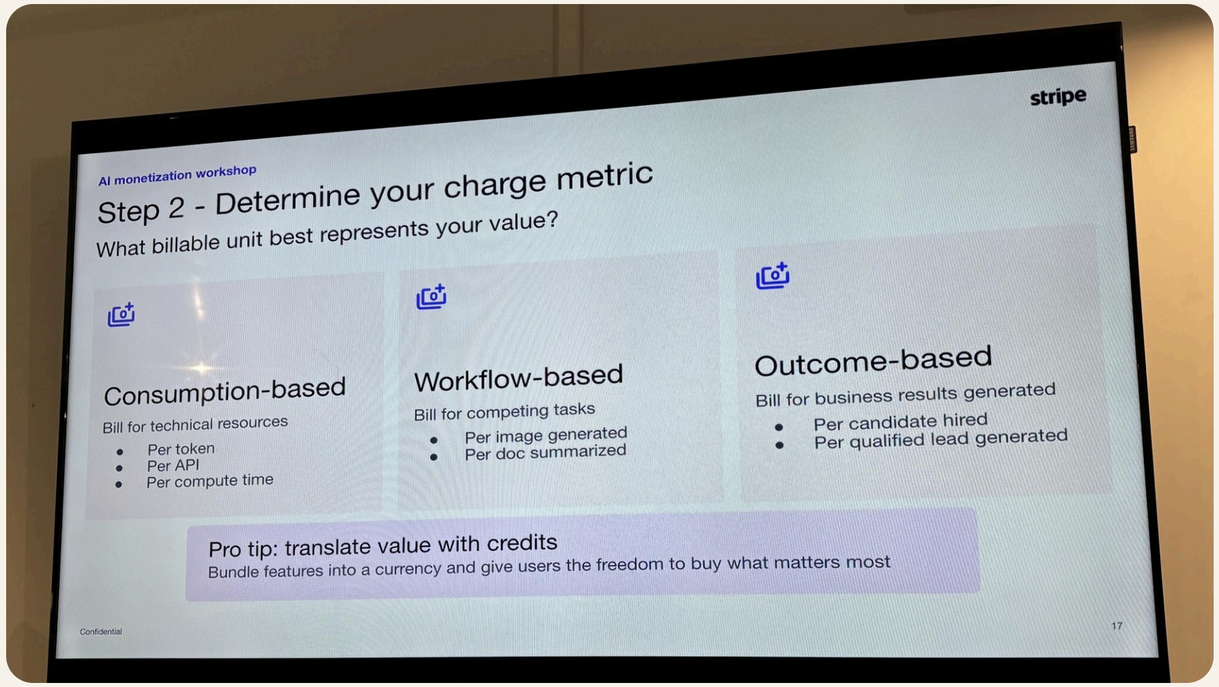

Agent observability.

Agent sprawl is real

Many companies no longer know what their agents do, or where.

Track and fence

Track every agent and its work. Run agents inside guardrails.

SHIFT 4 · MARKET

Models converge. Pricing moves to outcomes.

Consumption: per token, per call

Workflow: per task completed

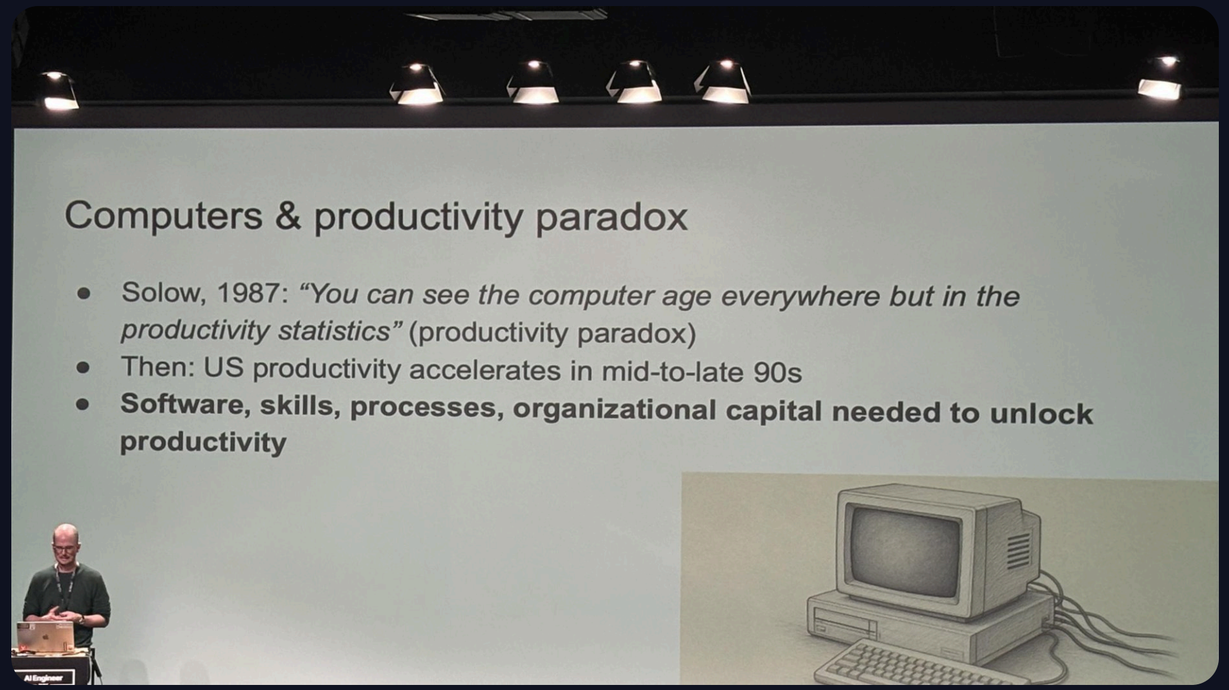

Outcome: per result delivered

Also: sovereign AI is a real option, and everyone is building infra.

WE HAVE BEEN HERE BEFORE

The technology is ahead. The organisations are not, yet.

Computers took a decade to show up in productivity. The unlock was software, skills, processes and organisational capital.

SO WHAT FOR ING

Four moves.

1 · CUSTOMER

Agent payments are an open field.

A natural chance for a bank to help shape the rules and rails.

2 · BUILD

Context and data are our edge.

Domain ownership and data foundations, not the model.

3 · CONTROL

Inventory before we scale.

Agent inventory, activity tracking and guardrails (DORA, EU AI Act).

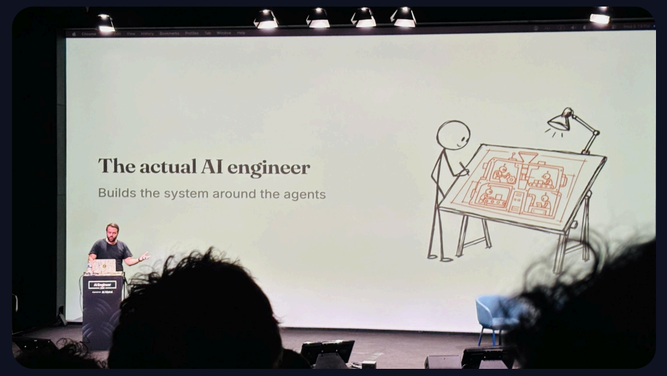

4 · MARKET

Don't bet on one model.

Buy and price on value and outcomes. Keep sovereign options open.

WHAT I'M TAKING HOME

The model is becoming a commodity. The advantage is context, data and discipline.

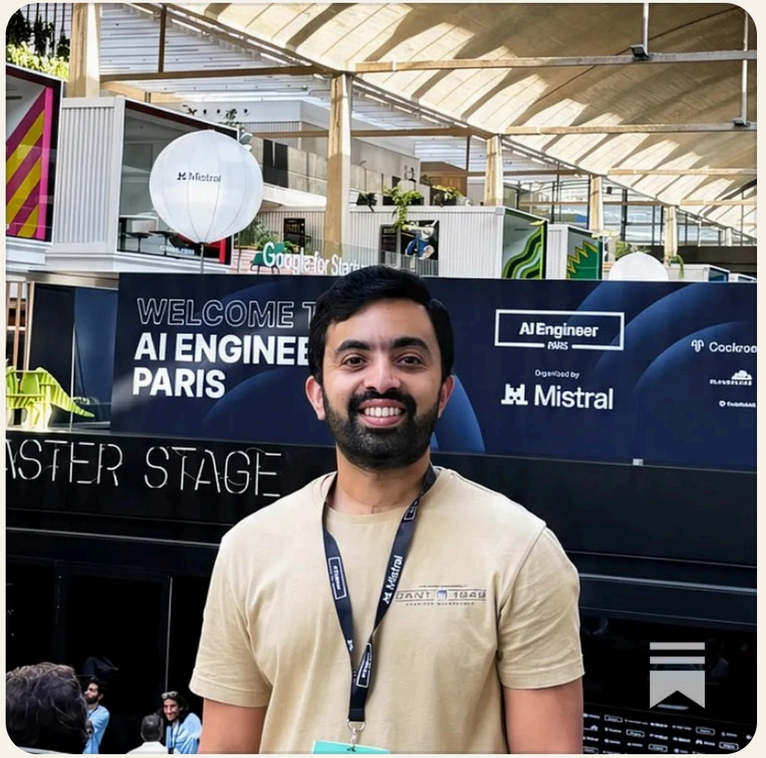

"The actual AI engineer builds the system around the agents."

YOUR TURN · ROOM AND ONLINE

Questions?

Which of the four shifts will show up first in our own work?

Jinto Jose · AI Transformation Lead, Strategy Office
